

ROOT BARRIER C3

**JAPANESE KNOTWEED
MEMBRANE**

CASE STUDY

Japanese Knotweed Ltd - Wreford
November 2009

On this project, when a site survey identified a number of locations contaminated with knotweed, the specialist contractor, Japanese Knotweed Ltd, chose to use our Root Barrier C3 membrane to manage the problem.

Once the knotweed was removed it was imperative that a reliable preventative solution was used to control re-occurrence of this particular invasive weed.

They selected our Root Barrier C3 because this sophisticated composite membrane is not only extremely tough and durable but offers a very high puncture resistance whilst remaining flexible, consequently it is not only highly resistant to root penetration but also easy to work with.

Feedback from Japanese Knotweed Ltd was very positive and the strategy a success. They were so pleased with the outcome that they sent us photos of the timeline of the project's development from start to finish, and have been a regular customer ever since.
