

GRASSMESH

GRASS REINFORCEMENT & PROTECTION

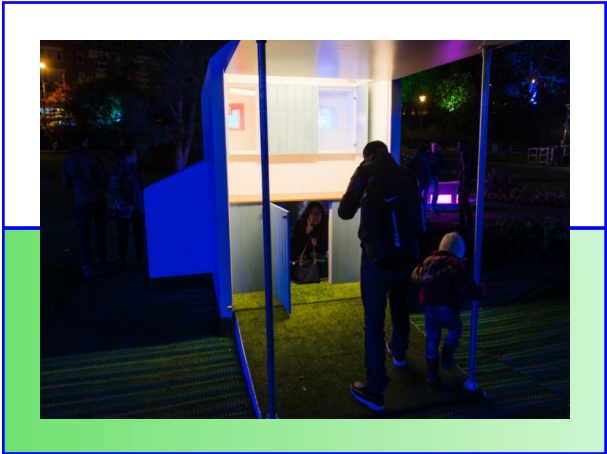

CASE STUDY

*Bournemouth Garden of Lights -
Bournemouth, England
December 2013*

Our GrassMesh™ range of robust, extruded, polyethylene meshes provided a discreet method to improve wear resistance and reinforce grass areas used by visitors whilst maintaining their appearance.

For this particular event, the product was used under the light pods - the light pods were individual lighting installations and each one was a mini world of light and colour with its own character to delight the visitors' senses.

The GrassMesh was an ideal solution for the event organisers to use to appropriately deal with the large footfall it experienced at this busy exhibition - whilst at the same time ensuring the grass around the pods maintained its appearance effectively. They were so pleased with the product that they sent photos of it in use at the event.
