Hessian

Our high-quality Hessian for Erosion Control is an eco-friendly and effective solution designed to combat soil erosion and promote vegetation growth. This natural fabric offers a sustainable temporary alternative to synthetic erosion control materials.

Applications:

Crafted from natural fibres, our Hessian is fully biodegradable, leaving no harmful residues behind. Ideal for use in a variety of environments including slopes, embankments, riverbanks, and construction sites.

The Hessian can also be used a frost blanket and day cover to protect debris from blowing away whilst work has stopped. Recently, the Hessian has also been used in suppressing invasive pond weeds.

Construction sites typically use Hessian to protect soil during and after construction, ensuring compliance with environmental regulations.

The Hessian can be installed to protect agricultural crops and soil from erosion, especially in areas prone to heavy rain and wind.

Hessian is ideal for garden beds, slopes, and other landscaped areas where soil stability and plant growth are essential.

Temporary protection for riverbanks, lakeshores, and drainage ditches, preventing erosion and promoting natural vegetation.

Features/Benefits

- Fully biodegradable,
- Soil retention
- Service life of approximately 1-2 years
- Prevents soil loss from wind and water erosion
- Stabilises soil on embankments
- Reduces stormwater runoff
- The open weave structure allows for excellent water penetration
- Promotes vegetation growth
- Light weight and easy to handle
- Environmentally friendly
- Cost effective
- Easy to install
- Cut lengths can be ordered
- 1.37m width
- Other weights available

Application Categories: Surface Erosion Control, Water Margin Protection
