VERSIVALL

## CASE STUDY

*Alexandra Canal Linear Park  
Tanglin Road, Singapore*

Our Vertical Greening Modules (VGM®) were bolted directly onto the concrete wall in a staggered design.

Two months of pre-planting prior to installation enabled firm establishment and vertical orientation of the selected plants in the controlled environment of a nursery.

The completed installation created a wall of lush greenery beside the pedestrian walkway that runs parallel to the adjacent road, hiding the concrete wall that marks the end of the raised platform installed over the canal to create the Alexandra Canal Linear Park. The living wall helps the otherwise bare concrete wall to blend seamlessly into the green ambience of the park and is enjoyed by one and all.
