VERSIWALL

CASE STUDY

Canberra Residences
501 – 525 Canberra Drive, Singapore

VersiWall GM (VGM) modules, were pre-planted with selected green wall plants. Pre-planting of the VGM modules in a controlled nursery environment allows the plants to be firmly established and vertically orientated before installation. Stainless steel pilasters were bolted to the concrete wall to enable firm anchorage of the VGM modules to the wall.

The living wall occupies the entire front facade wall of the car park which encompasses also the wall immediately above the entrance to the car park. Framed with lush plants the facade of the car park serves as a source of therapeutic stress relief as well as a refreshing cheerful living banner to welcome residents and their visitors as they return home or enter the condominium.
