VERSIWALL

CASE STUDY

*Hort Park
Singapore*

Steel anchoring pilasters were installed on the full face of the wall with careful attention to alignment. VGMs holding primarily soil-less lightweight planting media contained in a geotextile bag were pre-planted in a nursery environment.

Front and rear metal support frames are added to the VGMs on site to provide reinforcement and facilitate anchorage onto the pilasters. A drip irrigation system delivers timed release of water and nutrients to the plants.

VGMs can be individually dismantled from and re-mounted onto the pilasters to allow for easy maintenance or replacement if necessary.
