VERSIWALL

## CASE STUDY

### *Orchard Central Mall Singapore*

VGMs, comprising a geotextile bag filled with lightweight planting media were pre-planted with *Asplenium* and various species of ferns in a nursery environment prior to installation.

Encased in support frames on site, the VGMs were then mounted directly onto the slightly concave walls and a drip irrigation system installed to supply regular water and nutrients to the plants. Anchoring pilasters were welded onto steel support beams installed onto the walls. VGMs, comprising a geotextile bag filled with soil-less lightweight planting media were pre-planted in a nursery environment to allow for plant establishment. The VGMs were encased in metal support frames on-site and mounted onto the pilasters and a drip irrigation system installed. This green wall system allows easy mounting and dismantling of individual VGMs for maintenance or replacement if necessary. The green walls complement and create the atmosphere for al fresco dining on the 2 uppermost floors of the Mall.
